Sum of the percentage of victory points example:

Example (after three rounds):

Players A and B both win 2 games.

Both get 28 victory points - so there is still a tie.

Now the percentages of victory points will be calculated.

Player A:

Game 1: A gets 10 VPs, there were 32 VPs at the table, so his percentage is: 31.25%.

Game 2: A gets 8 VPs, there were 30 VPs at the table, so his percentage is: 26.67%.

Game 3: A gets 10 VPs, there were 36 VPs at the table, so his percentage is: 27.78%.

Player A's total is: 85.70%.

Player B:

Game 1: B gets 10 VPs, there were 30 VPs at the table, so his percentage is: 33.33%.

Game 2: B gets 10 VPs, there were 33 VPs at the table, so his percentage is: 30.3%.

Game 3: B gets 8 VPs, there were 36 VPs at the table, so his percentage is: 22.22%.

Player B's total is: 85.85%.

Therefore player B is ranked higher than player A.
